

# Same pool, repeated reuse

QEMU · protected leases · IDs/nodes are not byte measurements

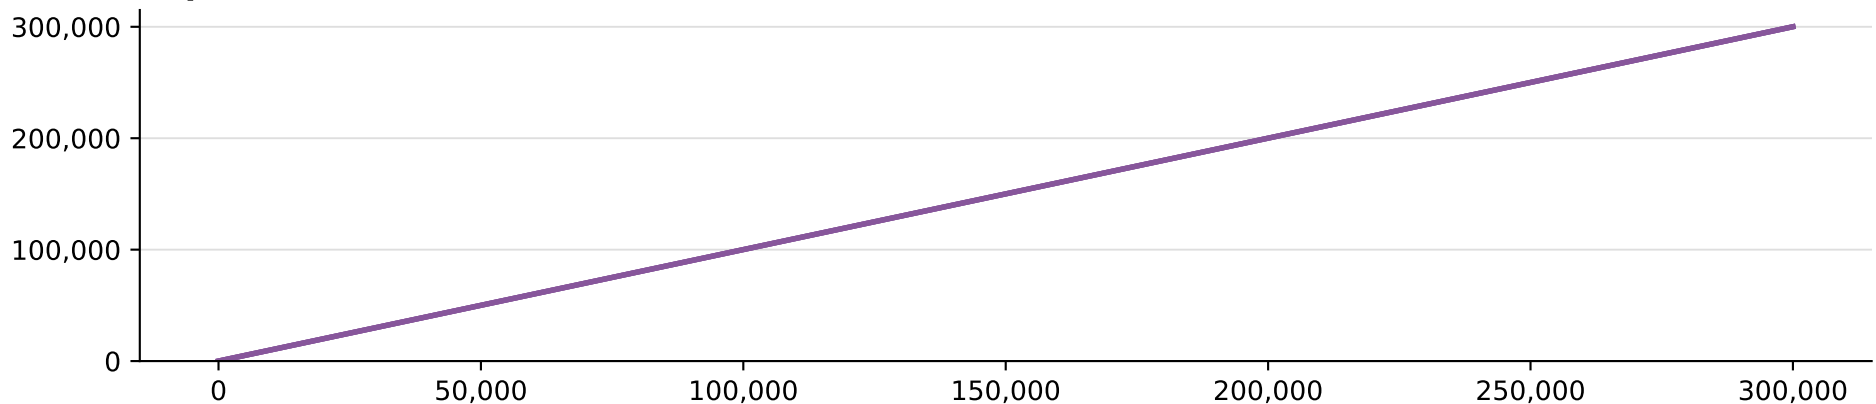

## Pool payload: constant in both arms

## PICASSO: reserved color IDs

## Capstone QEMU: nodes outside the free list

Number of reuses of the same 64-byte block

3 repetition(s). Payload excludes bookkeeping. PICASSO adapter additionally requests at most 128 B of live token storage.  
This Capstone QEMU returns no nodes during the run; this does not compare the current RTL reclaimer.
