

Storage still charged to the allocator after each release

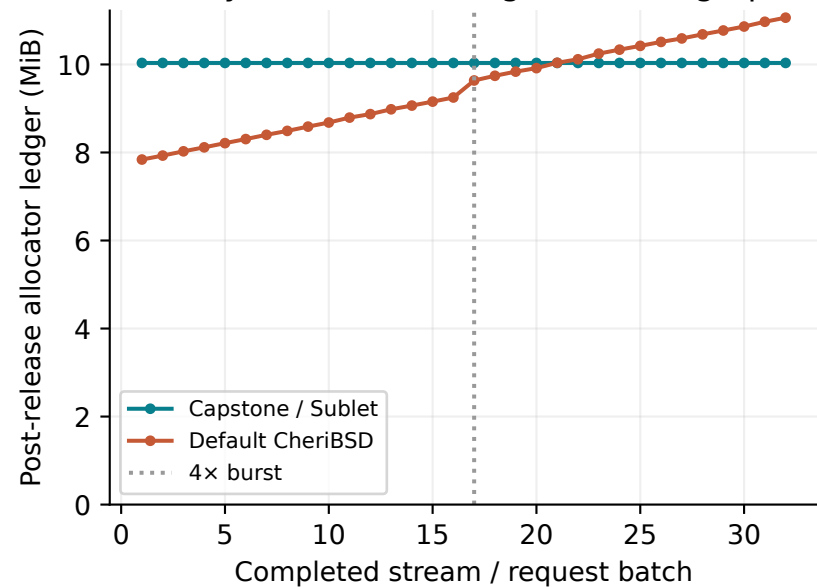

FFmpeg: 64 streams

mruby: 16 batches, small retained graph

mruby: 32 batches, large retained graph

Capstone: occupied buddy blocks. CheriBSD: jemalloc allocated, including quarantine and private allocations. Neither is total RSS. Capstone still reserves 8 MiB / 16 MiB logical pools from 16 MiB / 32 MiB grants, respectively. Three runs per point; median and full range. Gray lines mark mruby's burst; no forced revocation or policy overrides.
